Reduction System Installation

- New Construction Passive Residential/Commercial
- Existing Residential/Commercial

Customized System Installations

- Consultation & Installation of Radon Reduction Systems:
Sub-Slab, Block Wall, Sub-Membrane
- Well Water Aeration Systems
- Soil Contamination Sub-Slab Depressurization Systems

Nationwide radon mitigation is an untapped market on the cusp of exploding as the public becomes informed of the long-term dangers of radon and legislators grasp the hazards presented to their constituents.

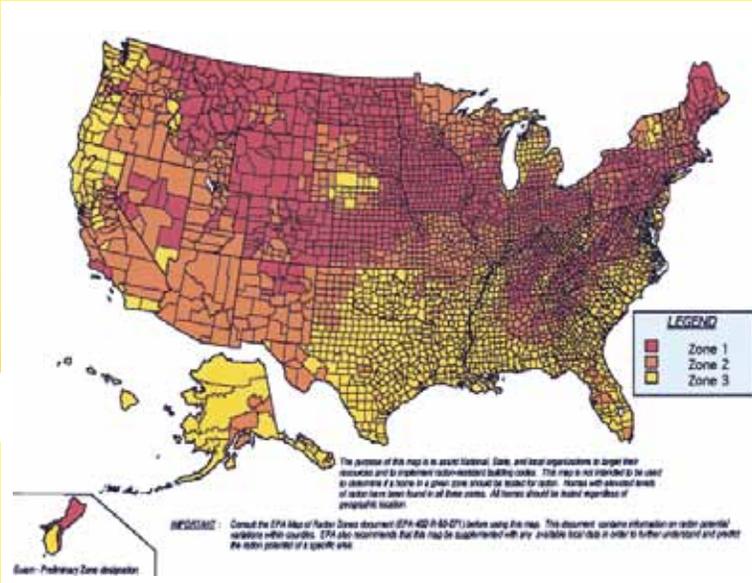

When you join our team, you can help improve the environment of those we serve — one customer at a time.

Nationwide Need

Radon is found in all 50 states and it can permeate into any structure (homes, offices and schools) resulting in dangerous indoor radon levels. Radon comes from the natural (radioactive) breakdown of uranium in soil, rock and water, ultimately seeping into the air we breathe. The greatest radon exposure source is in our homes, where we spend most of our time.

Reducing radon to safe levels in the environments where we live, work, play and learn is the ultimate goal of SRT Environmental Specialized Radon Technicians®.

EPA Map of Radon Zones

All homes should be tested regardless of geographic location.

At the time of this printing, 15 states have established radon requirements requiring radon service providers.

Homes with elevated radon levels have been found in all three zones.

Radon is the second leading cause of lung cancer in the United States and is associated with 15,000 to 22,000 lung cancer deaths each year.
